

# Bayesian modelling with JAGS

Bhutan, **11 – 23** September 2018

## outline schedule

as at 16 August 2018 : revised dates

Time slot	What we do	Comments
Before the workshop begins	<p>Before the workshop participants are asked to:</p> <ol style="list-style-type: none"> <li><b>Complete an R Skills Review.</b></li> <li>Download and install the necessary software and R packages.</li> <li>Download and preview the materials for Days 1-3.</li> <li>Send in one PPT slide to introduce themselves; these are compiled and used for the “Introductions” session.</li> </ol>	<b>Participants who need travel permits should get these in Thimpu on Mon 10 Sept.</b>
Tues 11 Sept evening (“Day 0”) Preliminaries	<ol style="list-style-type: none"> <li>Registration, collect name tags and materials, etc.</li> <li>Workshop overview: “Bayes for Wildlife”</li> <li>Introductions (PPT / round-the-room)</li> <li>Housekeeping, times, code of conduct</li> </ol>	
Wed 12 Sept Day 1 Bayesian approach	<ol style="list-style-type: none"> <li>Cross the line activity</li> <li>The Bayesian approach to data analysis and the role of prior information.</li> <li>Essentials of probability theory (and terminology)</li> <li>History of probability concepts</li> <li>Bayesian analysis of a simple model with one parameter.</li> <li>Simple model analysis using JAGS (run from R) and MCMC (Markov Chain Monte Carlo).</li> </ol>	Orangutan
Thur 13 Sept Day 2 JAGS; linear models	<ol style="list-style-type: none"> <li>Linear models for regression: JAGS code for regression, priors, checking output for convergence and effective sample size, diagnostic plots.</li> <li>Logistic regression for binomial data: use of link functions, JAGS coding, priors</li> <li>Multiple logistic regression; coding categorical variables in JAGS; interactions.</li> <li>More on the MCMC process in JAGS: adaptation (tuning), burn-in; prior sensitivity.</li> </ol>	G&E ants  Socks-in-box data
Fri 14 Sept Day 3 Multi-level or hierarchical linear models (GLMMs)	<ol style="list-style-type: none"> <li>Hierarchical or random-effects or partial-pooling models: concept of a random effect; adding random effects to logistic models; JAGS code; priors.</li> <li>Random intercepts and random slopes.</li> <li>Visualising output of GLMMs.</li> </ol>	Sock-in-box data continued
Sat 15 Sept	Rest day.	

<p>Sun 16 Sept Day 4 Occupancy modelling</p>	<ol style="list-style-type: none"> <li>1. Simple occupancy models: joint estimation of occupancy and detection parameters..</li> <li>2. Occupancy in JAGS: starting values for latent variable; JAGS model; priors; interpretation.</li> <li>3. Simulating occupancy data.</li> <li>4. Occupancy models with covariates: logistic linear predictors for occupancy and detection; standardizing covariates; choice of priors; missing values in covariates; collinearity.</li> <li>5. Model selection with WAIC and LOO.</li> <li>6. Species distribution maps from occupancy models.</li> </ol>	<p>Salamanders data</p> <p>Willow-tits data</p>
<p>Mon 17 Sept Day 5 Multi-year occupancy; data augmentation</p>	<ol style="list-style-type: none"> <li>1. Multi-year occupancy models: modelling extinction (or persistence) and colonisation; data requirements; JAGS code; priors; interpreting output.</li> <li>2. Data augmentation: estimating number of animals or species never detected (all-zero detection histories); example with closed capture data; JAGS code; choice of priors; checking that augmentation is adequate.</li> </ol>	<p>Grand skinks data set</p> <p>Kanha tiger data</p>
<p>Tues 18 Sept Day 6 Spatially explicit capture-recapture (SECR)</p>	<ol style="list-style-type: none"> <li>1. SECR: principles of SECR; data requirements and survey design.</li> <li>2. Example with rectangular state space: JAGS code; starting values; diagnostics; plotting activity centres.</li> <li>3. Irregular habitat area: preparing a mask; adapting JAGS code; checking and plotting results.</li> <li>4. Including covariates for traps and animals.</li> <li>5. Model checking with posterior predictive simulations.</li> </ol>	<p>Fort Drum bears data</p>
<p>Wed 19 Sept</p>	<p>Rest day.</p>	
<p>Thur 20 Sept Day 7 Open SECR models</p>	<ol style="list-style-type: none"> <li>1. Relaxing SECR's closure assumption: modelling (a) entry/exit, (b) change in AC, (c) both.</li> <li>2. CJS survival models with SECR-based recapture probabilities.</li> <li>3. Abundance estimation with AC drift.</li> <li>4. Abundance estimation with entry/exit.</li> <li>5. Extending this to multi-year models with abundance and survival.</li> </ol>	<p>Ergon &amp; Gardner 2014</p> <p>Royle et al 2016</p> <p>Green et al 2018</p>

<p>Fri 21 Sept Day 8 Multi-species occupancy models (MSOMs)</p>	<ol style="list-style-type: none"> <li>1. Concept of MSOMs; data requirements; data formatting.</li> <li>2. Fitting occupancy models to observed species as a sample from some community (species as random effects)</li> <li>3. Modelling species-specific effects</li> <li>4. Models with habitat and detection covariates</li> </ol>	
<p>Sat 22 Sept Day 9 Community parameters from MSOMs</p>	<ol style="list-style-type: none"> <li>5. Species richness using data augmentation</li> <li>6. Site similarity (beta diversity) and species similarity</li> <li>7. Regional summaries and maps</li> <li>8. Extensions of MSOMs: Dynamic community models, MSAMs.</li> </ol>	
<p>Sun 23 Sept Day 10</p>	<ol style="list-style-type: none"> <li>1. A la carte: review or extensions of topics covered or discussion of participants research projects.</li> <li>2. General discussion and feedback</li> <li>3. Closing</li> </ol>
